

4 ways to see if Fiery JobFlow can save your business time

Answer these questions to identify how much your print operation can benefit from Fiery® JobFlow™. If you answer “Yes” to some of these questions, Fiery JobFlow can significantly benefit your print operation and presents an excellent opportunity to increase profits.

Why Fiery JobFlow?

Every day you get print jobs from your customers that arrive in various stages of print-readiness, and have different levels of job setup complexity. Before you can print, you need to inspect each file for missing or corrupted assets, put it in the right imposition layout, and select the proper finishing options to ensure the job will print correctly the first time. Fiery JobFlow automates these job preparation steps, saving you time, eliminating bottlenecks, and significantly reducing errors. It integrates modules for PDF conversion, preflight checks, image enhancement, imposition, PDF correction, plus editing and approval.

1. Do you need to reduce print waste and rework?

Yes No

With Fiery JobFlow, you can set up and automatically apply preflight checks to identify potential issues such as missing fonts, wrong color spaces, unavailable page sizes, and incorrect orientation. JobFlow can correct typical print errors without returning files to customers or going back to native applications. You only print the jobs that pass the preflight check. Plus, you eliminate the manual actions that can introduce errors and inconsistencies, and risk customer rejection of the job.

2. Does your staff spend most of their time on repetitive setup tasks?

Yes No

Every time your staff touches a job, profits decrease and the potential for errors increases. With JobFlow, you can automate the initial job setup to get more done in less time. Create workflows for your most common job types such as brochures, business cards, catalogs, or calendars; and drop incoming jobs into the workflows for quick and easy one-click processing. This frees up your staff's time so you can assign them to higher-value jobs that do require human interaction.

3. Do you need to shorten the review and approval process?

Yes No

Fiery JobFlow allows you to build the job approval process directly into your workflows. Customers can view and approve the job the instant it has been processed. This speeds up print production and allows you to meet aggressive deadlines with accurate print output every time.

4. Do you want to include automation functions from other solutions to create more advanced workflows?

Yes No

The Connect module in Fiery JobFlow allows you to extend job-processing functions by connecting to third party applications using scripting or hot folders. You can automatically process jobs with other file-processing solutions as part of an advanced JobFlow workflow, and incorporate capabilities such as conversion of unsupported file formats or variable data. For more information on how to use scripting, refer to the [Fiery JobFlow Connect cookbook](#) (available in English only).

Get more value from your time. Start with the free version, Fiery JobFlow Base. When you're ready to scale, upgrade to the cost-effective paid version of Fiery JobFlow that offers more advanced automation capabilities.
